Software Developer

Webdev, Sysadmin, Hacker

I am Molly Stewart-Gallus a software developer. In projects I offer deep technical knowledge and a passion for user experience. In the workplace I offer a focus on processes and people. In projects I am looking for clarity and correctness. In workplaces I am looking for stability and honesty.

Professional Experience

Ruckify
February, 2021–June, 2021

Contract Web Development
Vancouver, BC

Angular, HTML, CSS, JavaScript, PHP

- Helped upgrade website to a more maintainable, mobile friendly, readable and accessible website style by updating fonts, colours, buttons and widgets to the new style guide using ANGULAR, web components and PHP templates.

- Made mobile friendly footer HTML and CSS.

- Coordinated work with pull requests with GITLAB, DEVDOCS and SLACK.

Global Village English Marketing
May, 2015–December, 2020

Fullstack webdev and sysadmin
Vancouver, BC

PHP, SQL, HTML, CSS

- Optimized website for small devices and slow international clients from yellow to green on Google Pagespeed Insights.

- In a team, used HTML, CSS and JavaScript for a PHP backend plan and redesigned the gvenglish.com website for small iPhone device sizes and a faster load speed for international students.

- Spedup website, debug and correct bespoke MariaDB SQL server configuration issues and performance problems

- Transitioned Windows email server and LAMP server to a more reliable and maintainable HTTPS configuration with CertBot and LetsEncrypt away from expensive long term certificates.

- Tracked down potential security issues, scrape and filter server logs and application CSV files with Python.

- Coordinated and plan issues and long-term goals using the Mojohelpdesk ticketing system and the teamwork.com project tracking web applications.

- Reworked a legacy XSLT templating system to use Webpack and Handlebars.

About Me

In my free time I blog horror poetry and short stories.
